

Tantalum chip capacitors with small dimensions

The manufacturer Matsuo focuses on smaller and smaller applications with higher requirements. The 251 series with face-down terminals is the focus at the manufacturer's and at Swissdis.

The tantalum chip capacitors supplement the extensive range of passive components at Swissdis AG, alongside resistors, ceramic multilayer capacitors and aluminium electrolytic capacitors, inductors and supercapacitors.

These capacitors' face-down terminal connections allow for very tight and space saving assembly. Making it possible to save on considerable space with small applications.

The following values can be supplied from the Swissdis warehouse:

Housing 0603-M (1608)

10UF / 4V
22UF / 4V
47UF / 4V
100UF / 4V

Housing 0805-S (2012)

100UF / 4V

Other values are available in accordance with the data sheet and on request.

We would be delighted to hear from you about possible areas for use.
