

Swissdis AG – Your Partner for Flex Suppressors

Our long-standing specialist partner NEC TOKIN Corporation continually comes up with innovations of the highest Japanese quality.

The Flex Suppressor was specially developed to absorb radiation noise from components. The sheets are typically installed in the shielding between two PCBs or directly on the radiation-emitting components. Installation is very easy because of the flexibility of the material and the self-adhesive film on the reverse side.

The effective frequency range lies between **10MHz and 10GHz**. The sheets are partially multilayered and available in various thicknesses, supporting multiple applications.

To ensure an optimal integration of our EMI sheets in your application, we can process any shape according to your design. **Thanks to our state-of-the-art water-jet technology, we can deliver your customized prototype within a few days.**
